

Join the Water Conversation

The City of Fresno is taking action to plan for our city's water future and wants your input!

Fresno's Water Future

Our lives and our city's vitality depend on access to a reliable and sustainable water supply. Fresno's groundwater supplies are dropping fast – and that's not just related to drought. Groundwater levels have dropped 100 feet over the last 80 years and the trend continues. At the same time, we are almost totally reliant on groundwater for our water supply.

Recharge Fresno

The City of Fresno is investing in a program – known as "Recharge Fresno" – to meet Fresno's water needs and allow us to replenish our groundwater supplies. Recharge Fresno includes water projects that, altogether, will improve and solidify our water supply now and for the future.

We Appreciate Your Input

Decisions about Fresno's water future impact all our citizens, businesses and ratepayers. To make sure you have access to all the information you need, we will host a series of community forums that focus on Fresno's water future – including where to get water, how to make sure it's clean and safe, and how to pay for it. Please join us.
